FUSION360

UNDERSTAND RISK BEFORE IT BECOMES AN INCIDENT

Organizations collect massive telemetry but still miss the risk patterns that precede insider incidents. FUSION360 transforms fragmented signals into operational risk intelligence security leaders can act on.

Your stack suffers from three failure modes.

THE NOISE TRAP: Thousands of alerts, most meaningless, burying real risk in noise.

THE BLINDNESS TRAP: Authorized actions, gradual drift, and autonomous entities operating undetected.

THE SEAM FAILURE: Risk signals span systems but no tool sees across them.

These create the **Detection Paradox**: the more telemetry you collect, the harder it becomes to see real risk. **FUSION360 was built to break this cycle.**

WHAT IT DOES

Most insider risk programs fail because detection is all they have. FUSION360 operationalizes the full risk lifecycle: baselines, continuous evaluation, prioritized signals, investigation, response, and reporting.

- Security teams detect and investigate.
- Legal and HR coordinate response.
- Leadership gains clear risk posture visibility.

Every function operates from one risk picture, one platform, no seams. FUSION360 builds on CONTEXT+ to deliver complete entity risk management.

WHY IT'S DIFFERENT

- **Vector-Based Risk Signals.** Risk modeled as a trajectory with magnitude, direction, Velocity, and acceleration.
- **Technical + Context Integration.** Telemetry fused with HR signals, role Changes, access activity, and organizational context.

- **Continuous Evaluation.** Every entity assessed in real time against its evolving baseline.
- **Investigation Workflow.** Single behavioral record per entity with case management and evidence packaging.
- **Automated Risk Brief.** Board-ready risk narratives generated automatically for entities, teams, or programs.
- **Structured Deployment Methodology.** Bootcamp delivers validated risk findings and a deployment roadmap in 30 days.

WHO IS THIS FOR

- **CISOs** seeking insider risk visibility.
- **Insider Risk Programs** struggling with signal overload.
- **DLP Leaders** separating real incidents from noise.
- **Security Teams** investigating behavioral anomalies.

PROOF POINT

"Before FUSION360, every team had a different view of risk. Now we operate from one risk picture. Investigations that took weeks close in days. As our program matured, the platform scaled with us."

Fortune 500 Financial Services Enterprise

False Positive Reduction 60-80%	Returned to Active Defense \$ 57K <small>Per Analyst Per Year</small>
Reduction in Insider Risk Incidents 50%	Existing Stack Value Unlocked \$ 500K

Start With a Red Vector Bootcamp

The Red Vector Bootcamp applies CONTEXT+ to your stack in 30 days. Delivered with a risk exposure report, business case, and action plan.
