

FUSION360™

Massive telemetry still misses the patterns that precede insider incidents.
FUSION360™ helps you understand risk before it becomes an incident.

Most insider risk programs fail because detection is all they have. FUSION360™ operationalizes the full risk lifecycle: baselines, continuous evaluation, prioritized signals, investigation, response, and reporting. It builds on **CONTEXT+™** to deliver complete entity risk management. Every function operates from one risk picture. One platform. No seams.

THREE FAILURE MODES IN YOUR STACK

THE NOISE TRAP

Thousands of alerts, most meaningless, burying real risk in noise.

THE BLINDNESS TRAP

Authorized actions, gradual drift, and autonomous entities operating undetected.

THE SEAM FAILURE

Risk signals span systems but no tool sees across them.

These create the Detection Paradox: the more telemetry you collect, **the harder it becomes to see real risk**. FUSION360 was built to break this cycle.

FEATURES

Entity Baselines

Every entity baselined against its own evolving behavior.

Continuous Evaluation

Every entity assessed in real time against its baseline.

Prioritized Signals

Risk surfaced by magnitude, direction, velocity, and acceleration.

Investigation Workflow

Single behavioral record per entity with case management and evidence packaging.

Coordinated Response

Security detects and investigates; Legal and HR coordinate response.

Automated Risk Brief

Board-ready narratives for entities, teams, or programs.

WHY IT'S DIFFERENT

- Vector-Based Risk Signals.** Risk modeled as a trajectory with magnitude, direction, velocity, and acceleration.

Continuous Evaluation. Every entity assessed in real time against its evolving baseline.

Automated Risk Brief. Board-ready risk narratives generated automatically for entities, teams, or programs.
- Technical + Context Integration.** Telemetry fused with HR signals, role changes, access activity, and organizational context.

Investigation Workflow. Single behavioral record per entity with case management and evidence packaging.

Structured Deployment Methodology. Bootcamp delivers validated risk findings and a deployment roadmap in 30 days.

PROOF POINT

"Before FUSION360, every team had a different view of risk. Now we operate from one risk picture. Investigations that took weeks close in days. As our program matured, the platform scaled with us."

WHO IS THIS FOR

- **CISOs:** insider risk visibility
- **Insider Risk Programs:** signal overload
- **DLP Leaders:** signal vs. noise
- **Security Teams:** behavioral anomalies

BEGIN YOUR ENGAGEMENT

The Red Vector Bootcamp applies FUSION360 in 30 days: risk report, business case, and action plan for your CISO.
