FOR IMMEDIATE RELEASE

Red Vector Names Counter Siege Solutions a Mission Partner to Advance Insider Risk Defense Across the Defense Industrial Base

Alliance pairs counterintelligence and human based-Insider threat-informed advisory services with the FULCRUM™ Platform to strengthen network insider threat programs, CUI protection, and AI agent governance for DIB, government, academic, and commercial enterprises.

HUNTSVILLE, AL and VALLEY FORGE, PA — April 27, 2026 — Red Vector, Inc., developer of the FULCRUM™ Platform for human and non-human entity risk intelligence, and Counter Siege Solutions LLC, a counterintelligence-informed security consulting firm serving the Defense Industrial Base, Academic Research Intuitions and government mission customers, today announced a strategic Mission Partnership to deliver end-to-end insider risk and controlled information protection services across the Huntsville defense ecosystem and beyond.

The partnership pairs Counter Siege Solutions' fusion-based advisory practice across counterintelligence, industrial security, cyber, and program management with Red Vector's FULCRUM™ Platform. Together, the firms will help DIB primes and subcontractors, government mission partners, research institutions, and commercial enterprises move from static risk assessments to continuous, context-rich defense against insider threats, CUI exposure, and emerging risks from agentic AI.

A Shared Approach to Modern Insider Risk

The insider risk landscape has shifted decisively. Organizations today face a blended workforce of human insiders, contractors, partners, and a rapidly expanding population of Non-Human Entities, including AI agents operating on behalf of the enterprise. Traditional compliance assessments and static risk scoring no longer keep pace.

Counter Siege Solutions brings proven counterintelligence defensive methodologies to the diagnosis: identifying compromise, theft, and insider risk through fusion across multiple security

disciplines. Red Vector provides the platform that operationalizes that insight, turning telemetry into contextual signals and risk signals that security leaders can act on in real time.

"Counter Siege Solutions approaches insider risk the way it should be approached: with the rigor of counterintelligence and the discipline of fusion across every security function that matters," said Steve Layne, CEO of Red Vector. "Their work gives organizations clarity on where the threats live. FULCRUM™ gives them the vector to respond. Together, we shorten the distance between insight and action."

"The partnership between Red Vector AI and Counter Siege Solutions creates a unified mission assurance capability that directly addresses the emerging threat landscape facing the Defense Industrial Base, academia, government, and the private sector. By combining advanced AI-driven threat analytics with tailored counterintelligence/Insider Threat support services, we're closing gaps that adversaries have exploited for years. Together, we provide organizations with the clarity, protection, and operational confidence required to safeguard critical missions, research, and national-level programs," said Brian Velazquez, CEO Counter Siege Solutions.

Joint Offerings

Under the Mission Partnership, the firms will jointly deliver:

- **Insider Threat Program Standup and Sustainment.** Counter Siege Solutions designs the program and operating model. Red Vector FUSION360™ provides the enterprise insider risk management platform that sustains it, delivering continuous contextual signals across the blended workforce.
- **CUI Protection and Contextual Data Defense.** CONTEXT+™ operates as a contextual overlay to existing data protection investments, closing the gap between policy and enforcement for organizations handling Controlled Unclassified Information under CMMC, NIST SP 800-171, and 800-172 enhancements.
- **AI Agent Governance.** AGENTWATCH™ extends insider risk discipline to agentic AI, giving security leaders visibility and governance over autonomous agents acting on the enterprise's behalf.
- **CMMC Readiness and 800-172 Enhancement Support.** Counter Siege Solutions delivers the **Level I and II prep, Third Party** assessment, CMMC compliance support and advisory work. Red Vector provides the continuous monitoring and insider threat capabilities that satisfy the most demanding controls.

Why Huntsville, Why Now

Huntsville is home to one of the most concentrated defense and aerospace ecosystems in the United States, anchored by Redstone Arsenal and its tenant commands, NASA Marshall Space Flight Center, and a dense network of primes, subs, and research partners. The region's contractors face mounting pressure to protect CUI, sustain insider threat programs, and govern the accelerating adoption of AI agents across mission-critical workflows.

"The Huntsville market needs practitioners who understand counterintelligence and insider threat at the ground level and partners who can deliver the technology to sustain what the practitioners build," Layne said. "Counter Siege Solutions is that practitioner. We are proud to be their platform partner."

Availability

The joint offerings are available immediately through Counter Siege Solutions and Red Vector. Qualified organizations in the Defense Industrial Base, government mission community, academic research sector, and Fortune 500 commercial enterprises can request a briefing at fulcrum@redvector.ai or contact@countersiegesolutions.onmicrosoft.com

About Red Vector

Red Vector, Inc. is a Risk-Adaptive Intelligence company specializing in insider risk management for enterprise, regulated, and critical infrastructure organizations. Drawing on 12 years of threat detection expertise homed in classified environments, Red Vectors Fulcrum Platform provides context-based risk intelligence, validated by Gartner's March 2026 "Treat Insider Risk as Human Risk" research to prevent insider incidents from escalating into data breaches. About Counter Siege Solutions

Counter Siege Solutions LLC is a counterintelligence-informed security consulting firm serving the Defense Industrial Base, government mission customers, academic research institutions, and commercial organizations. The firm helps leaders build resilient security cultures through fusion-based collaboration across counterintelligence, industrial security, cyber, and program management. Headquartered in the greater Huntsville region, Counter Siege Solutions delivers technology protection, insider threat support, and risk consulting grounded in counterintelligence and insider threat methodologies. Their approach is built on security fusion; integrating counterintelligence, insider threat, industrial security, cyber awareness, policy development, and operational risk management into one unified defense strategy. We help organizations move beyond compliance checklists and build security cultures that proactively identify, assess, and mitigate risk before compromise occurs.
